VRV 32 CONTROLLER
AIRNEXUS

PRODUCT KEY FEATURES

Mode Master Eliminator: Removes the need for a mode master on VRV 2-pipe systems.

Intelligent Auto Mode: Simulated auto mode by dynamically managing the air conditioner mode to improve comfort and efficiency.

Individual Zone Control: Precise temperature management only where you want it for a consistent and comfortable climate.

Versatile Interfaces: Offers a variety of user interface options, including tablets and screens, for intuitive system management.

Innovative Sensors: Architecturally pleasing discreet sensors for enhanced monitoring.

Accessories: Comes with a range of accessories to enhance system functionality and user experience.

Home Automation Integration: Airnexus integrates seamlessly with major home automation platforms such as KNX, Control4, and Loxone, providing a unified smart home experience.

Building Management System (BMS): Airnexus provides a gateway for integration with other systems using standardised protocols like Modbus and BACnet, ensuring compatibility with a wide range of building management systems.

WHY AIRNEXUS?

Airnexus is a leading manufacturing company specialising in advanced climate control solutions. Our flagship product is the VRV 32 HVAC controller, designed for seamless remote management for both 2 and 3-pipe VRV systems.

Airnexus products are convenient to use, easy to install saving you time and effort. With real time alerts to your smart device, intuitive interface and continuously enhanced app features we ensure seamless functionality for all users.
